Art Unit: 2823

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-4, 7-10, 13 and 15 drawn to a process for making a semiconductor device, classified in class 438, subclass 239.

II. Claims 5-6, 11-12, and 14 drawn to a semiconductor device structure, classified in Class 257, subclass 296.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (M.P.E.P. § 806.05(f)). In the instant case, unpatentability of the group I invention would not necessarily imply unpatentability of the group II invention, since the semiconductor device structure of the group II invention could be made by processes materially different than that of the group I invention, for example, the first gate electrode of a first MISFET in memory cell area having a first impurity concentration and the second gate electrode of a second MISFET in logic circuit area having a second impurity concentration lower than the first impurity concentration could be formed by blanketly doping the first and second gate electrodes with a first type impurity then covering the first gate electrode and counter doping the second gate electrode with a second type impurity opposite to the first type so that the impurity concentration of the second gate electrode is lower than that of the first gate electrode.

Art Unit: 2823

Because these inventions are distinct for the reasons given above and, as shown by the above different classifications, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

2. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
